Website Tender: Demonstration Brief

Overview
For the demonstration session, we ask bidders to present designs for four pages:

- Homepage
- Course page
- Events page
- Payment journey

Designs should be presented as clickable prototypes.

The college's brand colours are blue (#007AC5) and green (#7BC242). These should feature prominently across the designs, and we welcome a wider supporting palette that complements them. We have set out some requirements below, but we welcome design approaches that you feel best suit a Further Education college.

Content supplied
The college will provide all bidders with:

- Logo files
- Course information in an Excel spreadsheet
- Sample event details
- A selection of images

Please use this content in your designs so the panel can compare submissions on an equal basis.

Session format
Each session will last 45 minutes:

- 20 minutes for your demonstration
- 25 minutes for questions from the panel

Design requirements
All pages should be designed mobile first, with the mobile layout as the starting point rather than an adaptation of the desktop version. Please present each page on mobile first, then show how it scales up to tablet and desktop.

All pages should be designed to meet WCAG 2.2 AA accessibility standards.

1. Homepage

The homepage should include:

- The college logo and main navigation
- A prominent course search, with a sample search results page showing how courses can be filtered (for example, by subject, level, study mode and campus)
- A prominent area at the top of the page for key messages and campaigns
- Areas for video and images

Website Tender: Demonstration Brief

2. Course page

In the final product, course pages will be generated dynamically from a SQL database maintained by the college, so that one template displays every course. Please design this template using the course information supplied and explain how your build would bring in the data. If possible, show an example where you have integrated an external data source on a previous project.

The course page should include:

- A page header
- Space for a course image
- A clear way to organise detailed course information so it is easy to scan on mobile

3. Events page

Please design a template for events, including:

An events listing page, with a way to filter or browse events (for example, by date or event type)
A single event page showing the date, time, location, description and how to book

4. Payment journey

The college requires a secure online payment facility. Payments will include:

- Course deposits, paid before enrolment
- Materials fees, paid after enrolment
- Trips and other one-off payments

Payments may be made by students or by parents and carers on their behalf.

We have not selected a payment provider. Please show how you would present these different payment types as part of your prototype, including at least one complete payment journey. If possible, walk us through a payment journey on a site you have built.

Previous work

Please show the content management system on an existing site you have built, demonstrating how staff edit and publish content, ideally for a college or similar organisation.

After the session

If possible, please provide the panel with access to your prototype after the session so it can be reviewed on the panel's own devices.
